Description

Two do is an online web application that is focused on simple time and project management. Two do has dual purposes. The primary purpose is manage tasks associated with projects. In each task you can keep notes, assign due dates, and mark it based on the status of that task. The second purpose is on time tracking and management. As you complete tasks you can specify how much time you spent on each task. That number will be updated on the main projects page so you can easily track how much time you have spent on a project and have an easy breakdown for client billing.

Target Audience

The primary audience for Two Do would be professionals that manage multiple projects and bill their clients by the hour. The average user would be male or female between the ages of 22 - 50 years old.
